DETAILED ACTION

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objection

The claims are objected to because claim 12 is a duplicate of claim 11, claim 26 is a duplicate of claim 25 and claim 40 is a duplicate of claim 39. Correction is required.

Claim Rejections

Claim Rejections - 35 USC § 112

Claims 7, 18 and 35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 7, the recitation "said current source" on line 1 and "said additional capacitor" on line 3 lacks antecedent basis. It is unclear where they come from. The same is true for claims 18 and 35.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2816

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 6, 13, 15-16, 18, 27, 29-30 and 41 are rejected under 35 USC 102 (e) as being anticipated by Frans et al (US2005/0035797A).

Frans et al discloses in Figures 3-4 a PLL circuit comprising:

- a phase detector (40);
- a charge pump (52) coupled to the phase detector (40); and
- a filter including a capacitor (54) coupled between a first node (68) and a second node (ground); wherein the capacitor is inherently formed from a group of, i.e., FET capacitor, mica capacitor, or mica capacitor; and
- a compensation circuit (39) coupled to the first node (68) for supplying a compensatory current which is equal to the leakage current to the first node (68). Said the compensation circuit includes a current source (61); an additional capacitor (59) connected between the ground and a voltage buffer (60) and a current mirror (62).

Allowable Subject Matter

Claims 3-5, 7-12, 14, 17, 19-26, 28, 31-40 and 42 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The claims are allowed because the prior art does not disclose an additional capacitor coupled between the first node and a voltage source, a voltage doubler, the sensing element, the delay or the digital to analog converter as combined in the allowed claims.
